LET THE FUN BEGIN

Testing the Charging System on a Chaos Scooter

This is a simple guide, intended for Funbikes Customers who have purchased a Chaos Scooter, It contains instructional steps on how to test your charging system, and includes images to aid you in the process.

Testing the Charging System on a Chaos Scooter

This guide explains how to test the charging system.

What product does this guide apply to?

- Chaos 48 Volt 1000w Electric Scooter Powerboard
- Chaos 48 Volt 1000w Electric Scooter Big Wheel Powerboard
- Chaos Sport 48 Volt 1600w Electric Scooter Big Wheel Powerboard
- Chaos Sport 48 Volt 1600w Electric Scooter Big Wheel Off Road Powerboard

Introduction

To carry out these tests you will require a volt meter.

Step 1

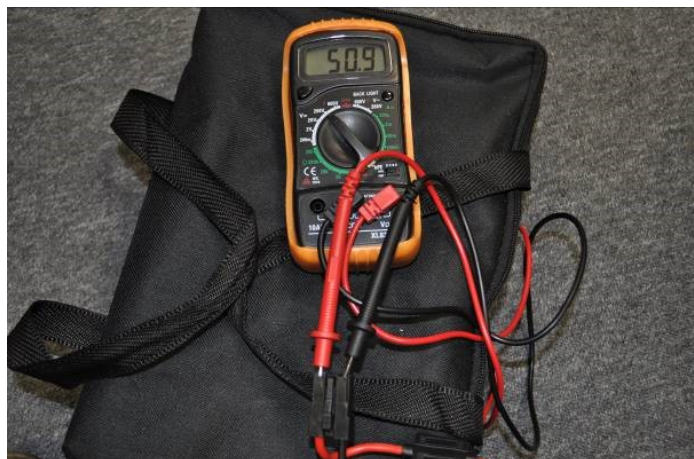

Disconnect your battery, *[for ease remove it from the scooter]*.

Step 2

Set your volt meter to the 200volt setting.

Step 3

Using the probes insert them into the black connector, if your battery is fully charged it will read 50 volts or more on your volt meter.

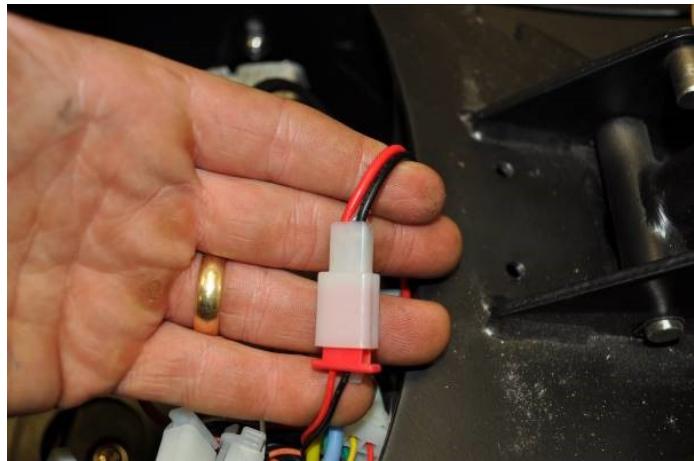

Step 4

To test the charge point remove the metal panel in front of the battery pack.

Step 5

Trace the wire coming from your charge point on the right hand side of the scooter. Disconnect the plastic connector.

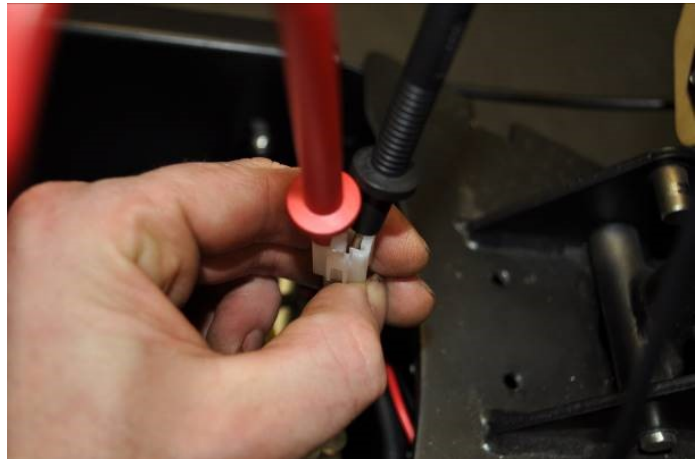

Step 6

Plug in your charger and turn it on.

Step 7

Using the probes test the output of the charge point. If it is working correctly it should be showing 50 plus volts.

Step 8

If it is not showing this you will need to test your charger. When you test the charger you must make sure that your probes **do not touch the outer edge of the charger or each other**. As this could result in the charger shorting out.

Step 9

Grip the charge point between your legs and turn the charger on.

Step 10

Carefully use the probes on to the end of the pins numbered 1 and 3, if the charger is working it should read 50 + volts.
